

UNI

Presenting UNI.

UNI is a wrist watch where user decides how the time is displayed and can create and share his own vision of time by customizing fonts, colors, backgrounds, digits positions or hands designs with just few clicks on the software, in Uni the universality is achieved through individuality of each user.

Uni has a simple square form body (32x32x9mm) made of soft touch coated plastic that sits on the wristlet is what we believe to be the most universal container for your creativity, in the middle it has 96x96 pixels OLED full color display, a mini usb on the left and a built-in accelerometer for activation via wrist move.

Uni has received IF Product Design Award 2009.

We are searching for interested companies and investors at the moment, and hope to make UNI available in Q4 2009.
